Prodoc – description for VAP.

Prodoc is a for Russian design companies dedicated PDM\ERP system, based on Lotus Messaging and Collaboration – platform. The main purpose is to secure a unified access point to the working and archive design documentation.

Prodoc allows designers to get quick access to the critically needed data, to know by whom and when they have been changed. This allows to improve significantly efficiency of only single designer and coordination level of design department in totally, what, in its turn, contributes to better controllability of a project. Planning tools and tools for man-loading report generation on basis of financial data and period of work execution data allow manager to get all the needed information for making decision in a structured and convenient readable form. Prodoc also ensures the intellectual property protection using security features, embed in the platform.

Prodoc has three important competitive advantages. Firstly, Prodoc fully conforms to the SPDS standards for project documentation registering and storage – this is the first system being developed in the light of characteristic features of Russian design and construction branch. Secondly, based on Lotus Messaging and Collaboration platform, Prodoc system is field with all the needed modern means of communication for an effective coordination of design departments (inter-office e-mail, IM-service, wiki etc.) Thirdly, Prodoc is closely integrated in the primary tools for designers and managers: Autodesk AutoCAD, Microsoft Office, MS Project.

Prodoc is a system, which significantly improves the operating efficiency of a design company.
